

## **Psych 100 - Nonverbal Communication Lab**

In this lab, your ability to make judgments about people based upon Nonverbal behaviors alone will be tested. Research indicates that the ability to “read” nonverbal cues varies from person to person and that personality traits such as extraversion and your sex (women, on the average, outperform men on tasks of this kind) are important variables.

In this lab, you will answer several questions about the data that is gathered and you will write a brief essay which will be a subjective reaction to your performance on the test.

1. Begin the lab by looking over the answer sheet and getting a sense of the types of information you will be asked to judge. Before viewing the videotape, give your best estimate of how many questions you expect to get correct out of 15. Record this estimate on the front of the answer sheet.
2. After you have responded to all of the videotaped situations, give a second estimate of how many you think you got correct. Record this estimate in the space on the back of the answer sheet.
3. Your lab assistant will read the correct answers to you so that you can compute an ACTUAL score for your performance.

In your lab report, write a brief essay (no more than two pages) in which you describe your performance on the task and your personal reactions to it. In this essay, you must cite an article in the proper format in the text of the report and also list it as a reference at the end of the report. In the course of your essay, be sure to answer the following questions:

Did you overestimate or underestimate how well you would do?

Did you feel more confident about your performance BEFORE you actually saw the videotape or AFTER?

How did your score compare to the averages for your group?

Which situations did you think were the easiest to read? Which ones were the most difficult? Why do you think some seemed more difficult than others?

Overall, did you think that this was a difficult or easy task? Did it generally seem easier or more difficult than the situations you encounter in your day-to-day life?

Did you find the task enjoyable or did you think it was tedious and boring? What was it about this type of task that made it pleasant or unpleasant?

At the end of your written lab report, please include a section under the heading “Use of AI in this Assignment.” In this section of your paper, please identify exactly which writing tool(s) you used and explain exactly how you used them. I am not putting any particular restrictions on how

you use them, but I want you to be completely transparent and honest with me about how you wrote the paper. I will only consider something an Honor Board violation if you claim that you *did not* use any AI tools and I then discover that you did. (And this is not really very hard for me to figure out!) If you honestly did *not* use any AI tools, this section will be very short – just one sentence certifying that no AI tools were used when you wrote the lab report.
